AMP NAMES CHRIS EASTON CHIEF RISK OFFICER

(Columbus) American Municipal Power, Inc. (AMP) has announced the appointment of John Christopher (Chris) Easton as chief risk officer, adding him to the organization's Executive Management Team.

Easton has held a senior management position with AMP since October 2014, serving as vice president of business operations. Prior to joining the AMP staff, he worked 30 years for the AMP member community of Wadsworth, Ohio, where he retired as director of public service. Easton is a former member of the AMP Board of Trustees, having served as Board treasurer and chair of the Finance Committee.

As chief risk officer, Easton will chair the Risk Management Committee and provide overall management of the Middle Office – the independent oversight, compliance, control and monitoring office for the organization. This includes the day-to-day valuation, reporting and monitoring of all power, energy and fuel procurement activities, as well as implementing and

overseeing the Enterprise Risk Management Program. His responsibilities also include management of AMP's Corporate Energy Risk Control Policy.

"AMP is a large and diverse organization (see description below) and risk management is a critical function that is greatly supported by our Board of Trustees and organization leadership," AMP President/CEO Marc Gerken said. "Chris' experience in the industry and with the organization will contribute greatly to efforts to enhance and expand our existing risk management activities, and our staff within the risk group."

ABOUT AMP:

American Municipal Power, Inc. is the nonprofit wholesale power supplier and services provider for 132 member municipal electric systems in the states of Ohio, Pennsylvania, Michigan, Virginia, Kentucky, West Virginia, Indiana, Maryland and Delaware. Combined, these public utilities serve nearly 650,000 customers. In 2014, the organization had approximately 14 million MWh of energy sales with revenue of approximately \$1.012 billion. AMP members receive their power supply from a diversified resource mix that includes wholesale power purchases through AMP and the open market and energy produced at AMP and member-owned generating facilities utilizing fossil fuel, hydroelectric, wind and other renewable resources. The organization is focused on sustainability and increased use of renewable generation resources. AMP currently has four run-of-the-river hydroelectric projects under construction on the Ohio River. Combined, these four projects will add more than 300 MW of new hydro capacity to the region. AMP is pursuing additional hydro, solar, wind and landfill gas projects. For additional information, visit AMP's website at www.amppartners.org.
